

# Optimize a query

In the previous activity, you examined a query. This query was for a table of data from an e-commerce site. Your stakeholder found that the query was particularly slow and asked you to suggest improvements that would optimize its performance. Now, share your response and discuss this experience with your peers. If you have not completed this activity yet, do so before completing this discussion prompt.

For this discussion prompt, review your response to the activity and consider the following:

Why is the query running slowly?

How would you optimize this query?

Why do you think your approach would succeed in optimizing the query?
