Understand your readiness score

Congratulations on completing the readiness quiz for the Business Intelligence Certificate. This reading will outline what your readiness quiz score means and your next steps. If you are already familiar with the fundamentals of data analytics, then you have a solid foundation for the concepts that will be taught in these courses. And if you need some resources to help you build up those foundations before starting this program, then this reading will also point you in the right direction. In order to earn your certificate, you will need an overall score of 80% or higher on all graded materials. The following is a breakdown of what your score means and your next steps for this program:

If you scored 100% on the readiness quiz:

- You're probably very familiar with the fundamental concepts involved in data analytics and can move on to the BI certificate directly.
- You can review videos, readings, and activities throughout the course to learn more about how BI builds on your current understandings of data analytics.
- You must take each of the weekly challenges and the course challenges; in order to earn the certificate, you will need an overall score 80% or higher on these graded assessments.
- After you complete the weekly challenges, proceed to Course 2.

If you scored between 90% and 99% on the readiness quiz:

- You're familiar with the fundamental concepts involved in data analytics and can move on to the BI certificate.
- However, we recommend that you review some material from the <u>Google Data Analytics Certificate</u> ↗ based on any questions you missed to refresh your memory of those topics.
- You can review videos, readings, and activities throughout the course to learn more about how BI builds on your current understandings of data analytics.
- You must take each of the weekly challenges and the course challenges; in order to earn the certificate, you will need an overall score 80% or higher on these graded assessments.
- After you complete the weekly challenges and course challenge, proceed to Course 2.

If you scored between 80% and 89% on the readiness quiz:

- You have some background knowledge on fundamental concepts involved in data analytics.
- However, we recommend that you review lesson materials from the <u>Google Data Analytics Certificate</u> ↗ based on questions you missed in order to build your foundational knowledge before moving on.
- You must take each of the weekly challenges and the course challenges; in order to earn the certificate, you will need an overall score 80% or higher on these graded assessments.

If you scored less than 80% on the readiness quiz:

- No problem—the <u>Google Data Analytics Certificate</u> ↗ has all the foundational material you need to succeed in these courses! We strongly recommend that you earn your Google Data Analytics Certificate first, then continue to the Google Business Intelligence Certificate.
